- **Basic Knowledge of Data Structure.**

Project Details

Title: Material Management System

User Interface : HTML5, CSS3 and BootStrap5

Client-side Scripting : JavaScript **Programming**

Language: Java

Framework: Spring n Hibernate

Database: My SQL

Server Deployment: Apache Tomcat server

IDE: Eclipse

Project Description: The project title “Material Management” is a Material Management web application for maintaining and choosing materials. The project Material management system is developed in JAVA using the Spring Hibernate framework, which mainly focuses on the basic operation of raw material like adding new employees, a new category, new product, purchase, issue, generating a report, etc.

The main objective of the project on Material Management is to manage the details of raw material, employee, purchasing, and issues. It manages all the information about raw materials, suppliers, stocks, inventory level, etc. The purpose of the project is to build an application program to reduce the manual work for managing the inventory, employee, purchasing, issue.

Roles and responsibility :

- Developed Backend and connectivity to My Sql Administrator With the help of JDBC API.
- Developed UI and functionality as a company profile module according to wireframe use cases.
- Developed UI and JSON Format and Create Web Pages for Employee Registration and Categories etc.
- Manage UI and logic for set availability.

Title: Blood Donation Management System

User Interface : HTML5, CSS3 and BootStrap5

Client-side Scripting : JavaScript and JQuery

Programming Language: Asp.net & C#

Framework: .Net

Database: Microsoft SQL Server

Server Deployment: Microsoft SQL Server Management Studio

IDE: Visual Studio 2012

Project Description: The project title “**Blood Donation Management System (BDMS)**” is a Web-based application that is designed to store, process, retrieve and analyze information concerned with the administrative and inventory management within a blood bank.

This project aims at maintaining all the information pertaining to blood donors, different blood groups available in each blood bank and help them manage in a better way.

The main objective of the project on the Blood donation Management system can collect blood from many donators in short from various sources and distribute that blood to needy people who require blood.

Roles and responsibility :

- Developed Backend and connectivity to Microsoft SQL Server.
- Developed UI and functionality as a company profile module according to wireframe use cases.
- Worked on Model View Controller & CURD.
- Create Tables in Database
- Manage UI / UX and logic for set availability.
